Gas fires 2025

i am  since 1754

The fire specialists since 1754

What could be more inviting than a glowing cosy real flame? Whether you prefer a classic or a sleek design, at DRU you will find your ideal gas fire. Thanks to our knowledge and expertise - we can rely on 270 years' experience when it comes to providing comfortable, sustainable, safe heat and atmosphere in your home - we will always offer the best solution for you. Our innovative craftsmanship is evident and can be found in each and every model in our series of modern gas fires, all of which satisfy extremely strict requirements in terms of sustainability, efficiency, emissions, safety and ease of use. After all, we keep improving, each and every year. If you want to heat your home in style, choose a DRU.

Balance between people and their surroundings

At DRU, customer satisfaction and efficiency go hand in hand with safety and environmental friendliness.

Premium-quality ambition

We do what we say and say what we do. We are ambitious and critical and continuously improve ourselves.

The convenience that makes the difference

Convenience for the end user is always key. Our focus: working on smart, innovative, comfortable products.

Continuous development

We are curious, keen to learn and forward-thinking. Progress only comes from continuous development.

i am comfortable

Ultimate heat, ambiance and convenience? That's what I offer you. Install me wherever you want and I'll provide the most beautiful fire. I can be operated by simply clicking the button from the comfort of your sofa and no wood is required. Entirely safe, clean and simple. And did you know I'm future-proof too? I'm a sustainable alternative when used with biogas or bio propane. In short, I offer you nothing but benefits and I'm sure I'll be the perfect addition to your home!

how do I make you feel?

I'd be a great choice for your living room. After all, you want atmosphere and coziness at home as well as warmth and comfort. I come in all shapes and sizes. Discover the best way to integrate me into your home here!

Stylish and warm

Are you looking for a new fire to heat your home or is ambiance your priority? What you are looking for will decide the first step towards finding your new perfect fire.

Design for all

Do you prefer a classic design or sleek and modern? At DRU, you will find the fires for that suit your home and every space. Choose the fireplace that suits your interior.

Our range of fires

Space and output

The gas fire's ideal output will depend on the space in which it is to be installed, how well your house is insulated and the fire usage: do you switch it on every day or just during the weekend, for instance? Taking these factors into account will ensure you always choose the most sustainable solution for your home.

Get inspired

At an authorized DRU dealer in your area you can get tailored specialist advice and take a closer look at our models. This way, you make the best choice for a fire you'll enjoy for years to come.

bespoke ambiance and heat

Less consumption, less heat, without compromising on atmosphere. Sounds great, right? I'm Eco Wave and I'll take care of it for you! Actually, we'll do it together, as you can control consumption and the flames. With my help, you'll be able to enjoy realistic flames in your stylish fire all year round.

Efficient, elegant and easy to use.

Eco Wave

Control over your energy

Our unique Eco Wave technology in the gas fire burners will reduce your gas consumption by up to 50% without affecting the ambiance in your home, enabling you to enjoy a stunning flame picture all year round and have full control over your consumption. Controlling the heat, flames and consumption is very simple using the DRU Fire app or DRU remote control. There is a choice of two different energy saving modes or you can even develop your own, making it very sustainable and tailored to your specific needs!

Eco Glow

100% ambiance, 0% heat

Prefer to drop the heat and keep the ambiance?
Then switch to the Eco Glow function. Eco Glow enables you to enjoy a glowing fire thanks to its LED burner bed.
This realistic burner bed does not give off any heat and can be controlled separately. This means you will be able to control the ambiance in your home using the DRU Fire app or remote control.

a unique look

Everyone has their own tastes. And a good thing too, because endless combinations are possible with me. Would you prefer a black, sleek internal lining or a more robust look? And what do you want the wall panels to look like? At DRU, you can choose your own design, right down to the tiniest details.

Choose your own design

You can choose the internal lining* of pretty much all of our gas fires yourself. 6 different designs are available: black, ceraglass, matt glass, rib cast, classic stone (DRU) and classic stone (DRU Global). Each design does something different to the inside of your fire. Black is sleek and is ideal in a modern living room. Ceraglass has a beautiful mirror effect, creating extra depth in the fire. Rib cast is our most robust internal lining. Last but not least, you can choose from 2 types of classic stone, each with a classic look.

** Available on some models.*

Black

Ceraglass

Matt glass

Rib cast

Classic stone
(DRU)

Classic stone
(DRU Global)

Complete your fire with wall panels

You can also choose the look of the exterior of the fire yourself. Our rib cast wall panels* will make your fire interior even better. The wall panels are about 30 cm wide. The height depends on the type of fire and is fully tailored to that.

** Available on some models.*

Clear View glass
Scan the QR code.

Clear View glass

perfect view

The perfect view of my flames obviously depends on the quality of the glass used. Would you prefer anti-reflective glass or not?

And how should you keep that clean? Fortunately, our manufacturers have thought of everything to enable you to enjoy me unhindered.

Ultra-clear view of the flames

Having a good view of the flames means extra enjoyment of your burning gas fire. Which is why at DRU you can choose Clear View glass*: anti-reflective glass providing an optimum view of the flames. This glass is ideal in rooms with little direct sunlight or in dark-coloured interiors.

* Available on pretty much all models in the range

Easy release door system

clean in no time at all

Many of our gas fires come with a handy easy-release door. Easy to open without force, ideal for quick cleaning of the glass panes and annual maintenance by an engineer.

- Can be opened directly without screws, tools or force required
- Subtle, concealed door lock
- Invisible frames for more glass surface and unhindered view of the flames
- Closely sealed: safe, optimum burning guaranteed

for every type of gas

My designers don't just look at the design when developing energy-efficient fires and heaters. They also ensure maximum flexibility. Which is why we can all run on various types of gas... making us suitable for any property!

What does it cost to run a DRU gas fire?

Calculating the consumption of a specific fireplace is very simple. You calculate the cost per evening, assuming 3 hours of burning on regular natural gas.

Know the cost within a minute with our gas consumption calculator.

Why should you still go for gas?

Gas has been a much-discussed fuel in recent years. Gas prices have been soaring due to all kinds of international developments. And fewer and fewer (new-build) properties have any gas connection at all. But did you know that a gas fire is still a very sustainable, future-proof choice? Even if you don't have a gas connection, as is the case in several countries. We will be happy to highlight the benefits of a DRU gas fire.

Sustainable gas: (bio-) propane

DrU gas fires run on various types of gas. Natural gas, of course, but also all kinds of sustainable bottled gas, such as biogas (methane and propane). Biogas is released from waste, residues and plant oils, making it a sustainable type of gas and an environmentally friendly alternative to natural gas. Hence you will be using renewable energy and avoiding fossil fuels. In addition, DRU gas fires have already been prepared for a substantial hydrogen blend percentage.

Highly efficient

A gas fire is a highly efficient source of direct heat. You will only be heating the room you are in and not others. What's more, DRU gas fires burn extremely efficiently. Almost all the heat produced (up to 90%) goes straight into the living room, meaning very little heat loss. And you will have full control over this heat. Keen to reduce the heat but keep the atmosphere? Then switch over to the unique functions that our gas fires offer, such as Eco Wave or Eco Glow. Now that's what we call sustainably enjoying your gas fire!

Ready for the future: hydrogen

You may well have a gas connection now but want to wean yourself off gas in the future. In which case, you can't go wrong with a DRU gas fire. Even after purchasing a fire, you will still have the option of switching over to a different type of gas, such as (bio)propane. Thus giving you control over whether or not you want to continue using natural gas as a source of heat. What's more, DRU gas fires are prepared for a hydrogen blend of up to 20%. If your gas network is ready, so are we!

All DRU gas fires come with the VBS system. This system ensures that, irrespective of the composition of various types of gas, your fire will always keep burning. Guaranteeing you heat and cosiness for many years to come!

This brochure only features images of gas fires that run on natural gas. Flame colour may vary when a fire is running on another type of gas.

i am **maestro**

I'm the most exclusive and top of the range model within the DRU gas fire collection.

The fact that I come in various shapes and sizes means I'll suit practically any interior and home. And thanks to my unique burner technology, you're always assured the most beautiful fire with lively flames. What luxury!

useful to know

Easy release door system

Easy release door system means you do not have to use any force when opening your fire. What's more, this handy drop-down door is ideal for cleaning your fire.

VBS

All DRU gas fires come with the VBS system. This system ensures that, irrespective of the composition of various types of gas, your fire will always keep burning. Don't you have a permanent natural gas connection? No problem. Our fires also work on butane, biogas or biopropane.

Direct flue

We will happily give you full freedom to install your fire wherever you want. You could (for example) have the extraction for your fire run through the façade. The extractor will connect straight up to the fire and run with a 90° bend to the exterior.

choose your look

Frames only for Metro 200XT

i am lugo

The feel of an open log fire... who doesn't want that? My stacked logs will give you the outdoor experience while you're nice and cosy indoors. The fact that

I don't feature any ventilation openings means my design is always sleek.

Feel free to complete my design by going for 2-sided or 3-sided glass.

3-sided

useful to know

PowerVent®

PowerVent® is a plug & play concentric extraction system with fan. The flexibility of this extraction system makes it possible to install a gas fire in practically any situation.

Frames

Our fires come with a frame as standard, but are also available with customised frames or frameless.

VBS

All DRU gas fires come with the VBS system. This system ensures that, irrespective of the composition of various types of gas, your fire will always keep burning. Not got a permanent natural gas connection? No problem. Our fires also work on butane, biogas or biopropane.

sustainability

Eco Wave

Reduce your gas consumption by up to 50%, without affecting the atmosphere in your home.

a gas fire anywhere you like

PowerVent®

What is PowerVent®?

Gas fires obviously need extraction.

An existing chimney, an extractor leading out through the roof or the façade, or... our PowerVent®. PowerVent® is a plug & play concentric extraction system with fan. The flexibility of this extraction system makes it possible to install a gas fire in practically any situation. Living in an apartment, a terraced house or a property without a flue pipe?

No problem! PowerVent® gives you full freedom to install your fire wherever you want.

Benefits of DRU PowerVent®

- Extraction of up to 100 metres with a variety of bends
- Flue pipe diameter of Ø 10 cm
- Control unit in control hatch, with built-in pressure gauge
- Compact power box, which can be installed outdoors and indoors
- The perfect solution for terraced houses, apartments, restaurants, hotels, shops and farms

no chimney but still want to install a gas fire?

Existing chimney

- Via roof
- flexible pipe in chimney

No chimney

- Via roof (flat)
- straight or with bends

- Via roof (sloping)
- straight or with bends

- Via wall / Direct flue
- direct to the fire with a 90° bend to the exterior
- possible on many of the models

- Via wall
- first 1 metre vertical, then a 90° bend

PowerVent®

- Up to 100 metres horizontal
- Many bends possible
- Through crawl space

Scan this QR code.

frameless and sleek finish

[+] frames

Frameless, bottom of frame removed

Standard frame

Optional frame (customisation possible)

With or without frames

All our gas fires come with a frame as standard.

Prefer to integrate your gas fire seamlessly into the rest of your interior? You can!

After all, for several of our fires it is possible to remove the bottom of the frame. Thus enabling the fire to be built snugly into a natural stone plateau or (for example) recessed into the floor, directly against the glass window.

Full customisation

Want to personalise your fire a bit more?

For the built-in fires in the overview below, you choose the width of the frame yourself.

Thus ensuring that the fire is the perfect fit in your interior.

full control and ultimate convenience

RCH remote control (DRU)

- extensive control functionality
- Honeywell controls

RCE remote control (DRU and DRU Global)

- straightforward control
- Mertik controls

Domotica Home Automation

- connection to various domotica systems
- for both Honeywell and Mertik controls

All remote controls feature electronic ignition, thermostat function and clock function.

App and control RCH fireplaces

DRU Eco Wave fireplaces feature a Bluetooth control system. This ensures a fast and safe connection via the remote control or via the free downloadable DRU Fire app (IOS/Android).

Management module

Specifically for the recreation sector (holiday parks, hotels, etc.), DRU and ICY have developed a module to allow local control of fires and remote control by a reception system.

- Fitted with a motion and light sensor to ensure smart energy consumption
- Innovative and easy to use
- No separate remote control and no more batteries

Control hatch

When it comes to maintenance and faults, it is important to have access to the gas regulating block at all times. Which is why DRU has developed a special control hatch. This control hatch can be neatly integrated into the fire's set-up.

ventilation elements

Chimney breast ventilation to preserve your installation

Burning the fire generates heat in the chimney breast. In order to prevent cracking, it is important for the chimney breast to be ventilated. DRU has designed a variety of Lux elements for this purpose in ivory white and anthracite. These are integrated into the casing and can be fitted with mood lighting.
