

DOVRE

The original warmth from the North

2025-2026

About us

A broad range of cosiness

Staring at dancing flames in front of you, while warming yourself in front of your own stove or fireplace... so relaxing.

Dovre offers you a broad range of cosiness, with modern, timeless, or traditional stoves

Everything we create comes in premium grade cast iron.

Dovre's renewed heating technology offers dual combustion, guaranteeing high efficiency and less suspended particles. The result: an improved heat production and a cleaner and more environmentally friendly combustion.

When you choose an advanced Dovre wood stove or fireplace, you embrace the loveliness of 'cosy'.

On top of that, the technology Dovre uses keeps your energy budget under control.

Dovre as a brand

Did you know Dovre is the name of a mountain range in Central Norway? Legend says the Founding Fathers of the Norwegian constitution declared that Norway would continue to exist “til Dovre faller” (“until the Dovre mountains fall”).

The Dovre mountains are synonymous with being big, wide, solid, long-lasting, mysterious, extreme weather-resistant and surrounded by legend.

Born in Norway, raised in Belgium

1933

Establishment of the 'Dovre Peisen' ('Dovre Fireplaces') company, in Norway. Cast iron parts bought from the ULEFOS foundry, founded in 1657. Portfolio limited to 4 fireplaces: 2 heights only, either with stripes or the legend of bucks and goats on the back wall.

1958

Leon Gehem (father of the current owner, Tom) travels to Norway as part of his job with Eurochemic, an international consortium active in nuclear energy. He gets acquainted with Norwegian culture and customs, notably the cosiness of Dovre fireplaces.

1962

Leon's job leads him to Belgium.

1964

Leon installs a Dovre fireplace in his new house, directly imported from Norway. Shortly after he decides to import DOVRE fireplaces as a side job.

1972

The nuclear energy business slows down and Leon leaves Eurochemic. He acquires the Dovre sales rights for the Benelux and sets up a real warehouse where limited assembly work begins.

1973

The first oil crisis skyrockets the sales of wood-burning fireplaces (and stoves).

1976

Purchase of the current HQ site in Weelde, in a former fertiliser factory. A showroom, offices, R&D lab and assembly hall are built. At that time, Dovre Peisen sources its castings from various foundries in Europe.

1980

Buyout of the Norwegian company, making Dovre a 100% Belgian.

1981

Construction of the Dovre foundry in Weelde to become independent from castings suppliers who cannot keep up in terms of capacity. At that time, the first Dovre stoves are born: the iconic models 100, 300 and 342.

Since then, Dovre has never stopped evolving its stoves and fireplaces portfolio, to warm you up.

Present

Today, we export our products worldwide through our network in more than 20 countries to supply our different local markets.

We develop, produce, and sell our own Dovre products: high-quality cast iron wood stoves and fireplaces. We also produce advanced cast iron Ferleon barbecues and cookware. Additionally, our foundry and factory produce a lot of products for third parties.

The Dovre brand is internationally renowned and recognised for its quality, solidity, robustness, and innovations in heating technology, with highly efficient, environmentally friendly engineered products for demanding end-users and markets.

We strive to set the standard for ultimate living experiences.

So, have a look at the various shapes of cosiness we can offer you!

Stoves

Dovre offers you a broad range of modern, timeless, or traditional stoves, made from premium cast iron, using state-of-the-art production techniques. Indeed, Dovre designs make a stylish feature in any interior. And since a stove is free-standing, it literally offers you the best and cosiest warmth 'around'.

Wood

The Dovre range consists mainly of wood-burning stoves, with superior heating technology, guaranteeing environmentally responsible combustion and high efficiency.

Saga

Saga is a series of wood stoves with a rounded design, named after the old Norwegian legend of 'The Three Billy Goats'. The Saga 101 and 107 are compact stoves with a large window for a broad view of the fire.

The Saga 207 combines the sleek look and side view of the SAGA107 but is larger for more heat.

The Saga 301, the largest in the series, offers maximum warmth and an XXL view.

All Saga stoves have a single air control and can be connected to outside air.

Length of wood logs: 50 cm
Nominal output: 9 kW

The nominal output depends on the final test results. Please check our website for the most up-to-date values.

Bold

The Bold features a distinctive round and monolithic design of typical modern stoves. It is very easy to use, thanks to its innovative 'slam-lock' closing system that allows you to close the door by slamming it. The stove is also equipped with a single air control and can be directly connected to outside air.

Sense

The Sense has a particularly elegant finish, thanks to its curved lines and a 3-sided view on the flames. It is directly connectable to outside air. The Sense has a 'slam-lock' closing mechanism which allows you to slam the door to close it. The stove can easily be operated via its single air control. The smaller models Sense 103 and Sense 203 are especially suited for low energy houses, thanks to their high efficiency and small nominal output.

Astro

The Astro is a model with a vertical combustion chamber. The design is contemporary, without compromising on functionality. Its direct outside air connection maintains a delicate balance between ventilation and airing. After heating, external combustion air is fed directly into the combustion chamber, resulting in clean and safe combustion.

Fireplaces

Nothing can really match the splendour of real flames. People have been warming themselves in front of an open fire for centuries. The dancing flames have a huge attraction to us.

A fireplace nowadays offers an alternative to a traditional open fire. Modern combustion techniques ensure that your 'closed' fire becomes a very functional and environmentally conscious way of heating and burning. Thanks to highly efficient combustion, you have much more control over fuel consumption and pollutant emissions.

Our insert fireplaces can be slid into the opening of an existing fireplace, without structural work.

Vista i

A Vista i built-in fireplace uses today's most refined combustion techniques to transform any existing open fireplace into a more environmentally friendly closed fireplace. For the interior lining, you have the choice between slat-shaped cast iron or vermiculite stones. The finishing touch is a 4 mm or 25 mm frame.
